### **Decoding activity from inertial sensors**

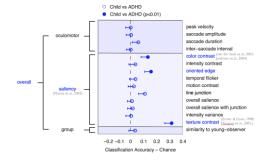

# **Qualifications:**

Eye-tracking
Machine learning
Computational modeling
Inertial sensor behavioral analysis
EEG

# Diagnosing ADHD, FASD, Parkinson's, etc from 5 minutes of watching TV

### Results (ADHD vs Controls)

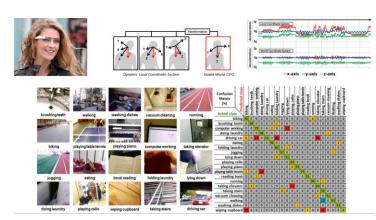

#### **Desired capabilities:**

Access to IC test participants

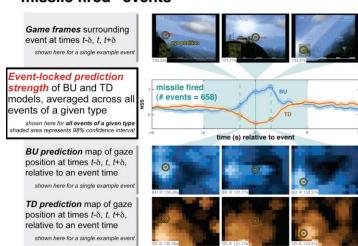

## Type of research we can support:

Decoding short-term mental state and long-term psychological traits from behavior including eye movements, head/limb/finger motions, and EEG.

# Predicting intentions from eye movements and computational modeling

#### "missile fired" events
